DETAILED ACTION

This office action is a response to the restriction requirement filed on 3/31/2005.

Response to the Restriction Requirement

1. Applicant's election without traverse of Group I, claims 1-9, in the reply filed on 3/31/2005 is acknowledged.
2. Claims 10-31 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 3/31/2005.

Specification

3. The disclosure is objected to because of the following informalities:
There is a blank in line 8 on page 5 and line 10 on page 12 and line 3 on page 13 and line 8 on page 14 of the specification.
Appropriate correction is required.

Claim Objections

4. Claims 3-9 are objected to because of the following informalities:
Re. Claim 3: The phrases "a first significance" as recited in line 5 and "a second significance" as recited in lines 5-6 appear to be --the first significance-- and --the second significance--.
Appropriate correction is required.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by Skeie (US PAT. 4,625,207).

Skeie teaches a process of forming surface acoustic wave information tag comprising steps of forming wafer-independent patterns (74,76,78,80) on a piezoelectric wafer (substrate 72) that encode digits of a first significance using a master reticle (equivalent with a metal layer having a pattern as disclosed in lines 19-33 of col. 5) as shown in Fig. 6 and forming wafer-dependent patterns (86) that encode digits of a second significance using different ones of coding reticle (partial removal of 84) as shown in Figs. 6-8 (also see col. 5, line 35 to col. 6, line 66).

As per claim 2 a transducer (78,80) is formed on the surface acoustic wave information tag as shown in Fig. 6.

Allowable Subject Matter

7. Claims 3-9 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Art Unit: 3729

8. The following is a statement of reasons for the indication of allowable subject matter: The prior art of record fails to disclose the claimed invention such that the wafer-independent and wafer-dependent patterns are formed by a process of forming reflectors distributed among a group of slots arranged by both pulse position and phase position, the reflectors encoding digits of the first significance and the digits of the second significance. It is not obvious taken alone or in combination of other references fairly to suggest the claimed invention.
